## 1. Carpooling

This app connects car drivers who have empty seats in their cars with passenger who are going in the same way so that they care split the travel cost.

### How does it work?

1. Driver post a trip with the following details:

- Depart city with precision (ex: Kigali-Sonatube, Kigali-Nyabugo, etc.)
- Destination city with precision (ex: Musanze-Gare, Rubavu-Petite barière,...)
- Date and hour of the trip
- Number of available seats
- Price
- Car Model

2. The passenger is able to see available trips and the corresponding details

3. The passenger choses the trip and proceeds to booking:

- If the passenger doesn't have an account, they are required to create one after choosing the trip (right before payment).

4. After booking, the driver is notified and has to confirm the passenger booking

5. After the driver's confirmation, both the driver and passenger can chat using the in-app messaging service

6. Once the trip is completed the driver is paid.

7. Once the trip is finished, Follow up messages to both the driver and passenger

*(Feel free to add or remove some functionalities)*

## 2. Ticketing

This app provides ticket booking services for inter-city buses using your phone

### How does it work?

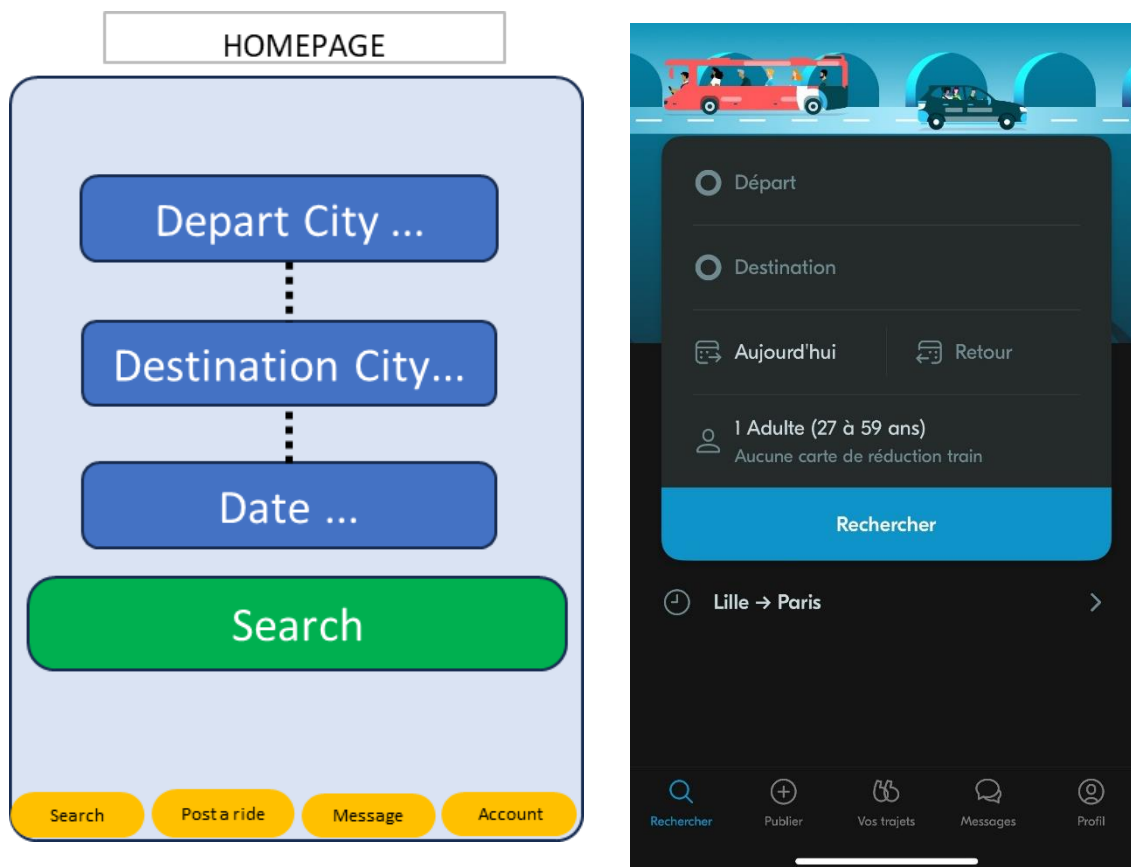

1. Travel agencies post online the available trips with the following details (atleast 2 days before the trip):

- Depart city and destination

# WeShare

- Time and date
  - Available Seats
2. You can book the ticket online in advance (at most 2 hours before the trip)
  3. Possibility to cancel your ticket (we need to set the time allowed limit to cancel the trip)
